Seeds were surface sterilized then germinated under axenic
conditions in the dark at room temperature on filter paper
with water, nyetatin and cefotaxime in coverad
crystallization dishes. Five-day old seedlings were
incubated at 90% RH for 24 hr. Shoots were then harvested,
total RAM was prepared, poly(A) RNA was purified, one
primary unamplified cDNA library was made, 600000 pfu were
in vivo excised to give pBluescript SK(-) cDNA phagemids.
These steps were performed in the TJ Close laboratory at
the University of California, Riverside (Choi, Close,
Fenton). Phagemids were plated and picked at the Clemon
University Genomics Institute (UUGI) (Begum, Palmer,
Frisch, Atkins and Wing). Plasmid DNA preparations, DNA
sequencing and sequence analysis were performed at CUGI
(Wing, Yu, Frisch, Henry, Simmons, Oates, Rambo, Main).
The sequence has been trimmed to remove vector sequence
and contains a minimum of 100 bases of phred value 20 or

CDNA was prepared from polyA+ mRNA using SuperScript Plasmid System Kit (Invitrogen). The double-strand cDNAs were fractionated in a sepharose CL-2B 40cm-columns and fragments sizing between 0.8 and 1.5 Kb were directionally cloned into the vector. Details of each source of RNA and library construction can be obtained at http://sucest.lad.ic.unicamp.br/public"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                CG262283

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ACCCGCTTGCCCTCGGCCTTGAGCGAGTTCAGCAGGCGGAGGTCGGTGCGGATGCCC 480
biosynthetic gene, gene fragment or gene cluster, especially an everninomicin-type or avilamycin-type orthosomycin biosynthetic gene, gene fragment or gene cluster. The method is useful for detecting the presence of any organism that contains DNA for the production of orthosomycins (both everninomicin-type orthosomycins and avilamycin-type orthosomycins) regardless of the level at which genes for orthosomycin production are expressed by the organism or the amount of orthosomycin production are expressed by the organism or the detection of new orthosomycin natural products, not produced by the organism. (Updated on 27-OCT-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Everninomicin; antibiotic; bottle-neck gene; orthomicin; fermentation;

                                                                                                                                                               The invention relates to identifying orthosomycin biosynthetic genes and its fragment/gene cluster (ABZ66670-ABZ666813), comprising detecting the Presence of a nucleic acid sequence coding for a polypeptide (ABP93207-ABP99362). The method is useful for identifying an orthosomycin biosynthetic gene, gene fragment or gene cluster, especially an personned fragment or gene cluster, especially an gene fragment or gene cluster. The method is useful for detecting the presence of any organism that contains DNA for the production of production and aviamycine. On the level at which genes for orthosomycin produced by the organism or the amount of orthosomycin produced by the organism. This allows for the detection of new orthosomycin natural products, not produced by the organism. This allows for the detection of new orthosomycin natural products, not produced by the organism. (Updated on 27-OCT-2003 to standardise OS field)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to identifying orthosomycin biosynthetic genes and its fragment/gene cluster (ABZ66670-ABZ666113), comprising detecting the ABP99362). The method is useful for identifying an orthosomycin biosynthetic gene, gene fragment or gene cluster, especially an eventincmicin type or avilamycin-type orthosomycin biosynthetic gene, gene fragment or gene cluster. The method is useful for detecting the gene fragment or gene cluster. The method is useful for detecting the orthosomycins of both eventinomicin-type orthosomycins of the corthosomycins of production are expressed the level at which genes for orthosomycin produced by the organism or the amount of orthosomycin produced by the organism or the detection of new orthosomycin natural products, not produced by the organism. This allows for the detection of new orthosomycin natural products, not produced by the organism. (Updated on 27-OCT-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Identifying orthosomycin biosynthetic gene, gene fragment or gene cluster, by detecting presence of nucleic acid sequence corresponding to 17 of flambamycins protein families.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            132 TCAGCTCGTCACGTGTACGCGGGGGACGTACAGGATCCACTGTCCGCCAGCCCGGCGGAA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   192 CTCCTGCTCCTTCGCCATGATCTCGTCGGCGTGGTTCCAGGCGAAGAGCAGCGCGTAGTC

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ABL50555 to ABL50562 represent contigs 1 to 8 from the Micromonospora carbonacea everninomicin biosynthetic locus gene cluster. The contigs encode the protein sequences designated ORF (open reading frame) 1 to 49, given in ABB06881 to ABB0630 he calibrate is useful for the construction of the everninomicin antibiotic in overproducing strains, and to allow chemical modifications of everninomicin to enhance certain properties via genetic manipulation or combinational biosynthesis. The gene cluster can be used to produce genetic systems and genes encoding novel enzyme activities, and avoid the problems of low yield and quality of everninomicins produced by chemical synthesis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   GTCCGGCCCGATGCCGCAGAAGTTCGCCACGGTCGCGCTCTTGGCGGTCGCCCCGTAGGC
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                CACCACCGTTTGCCCTCCGCCGTCAACGTTCGAGCAACGCCCGCAGGTCGTCGCGAT

Novel isolated gene cluster encoding polypeptides involved in everninomicin biosynthesis useful for construction of everninomicin overproducing strains, and to allow chemical modifications of everninomicin to enhance certain properties.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 11115 BP; 1521 A; 3924 C; 4057 G; 1613 T; 0 U; 0 Other;

This sequence represents the dark gene from Streptomyces peucetius. The invention relates to a recombinant microorganism which produces docorubicin (DoR), in which at least 1 daunorubicin (DaR) metabolism gene selected from dary and dark, has been inactivated. The microorganism is preferably S. peucetius WMHI658, WMHI654 and WMHI662. The function of the DaR gene is inactivated by insertion of a gene (preferably memory.) Anamycion resistance gene aphili into the daunorubicin metabolism gene. The blocking of the function of at least one gene of DaR metabolism can increase DaR and DoR production levels and cause the disappearance of baumycin-like products resulting in DaR and DOR secretion directly into the culture medium. The products can be used in the production of anti-tumour compounds. (Updated on 25-MAR-2003 to correct PI field.) (Updated on 27-AUG-2003 to correct OS field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Production of doxorubicin and daunorubicin - using a recombinant daunorubicin producing microorganism in which at least one dnrU or dnrX metabolism gene has been inactivated.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         164 GGATCCACTGTCCGCCAGCCCGGCGGAACTCCTGCTCCTTCGCCATGATCTCGTCGCGT

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             371
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    CACCGCGTCGGGCGTGCGGGGGGGGGGATGTGTGCGTGCCGGGGGTGAG 311
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1011 GCAGAAGTTCGCCACGGTCGCGCTCTTGGCGGTCGCCCCGTAGGCCACCACCACGTTTGCC 952
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            CTCGGCCTTGAGCGAGTTCAGCAGGCGAGCAGGTCGGTGCGGATGCCCTCGACGTCGGC 491
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to identifying orthosomycin biosynthetic genes and its fragment/gene cluster (ABZ6660-ABZ666313), comprising detecting the presence of a mucleic acid sequence coding for a polypeptide (ABP99207-ABP99362). The method is useful for identifying an orthosomycin biosynthetic gene, gene fragment or gene cluster, especially an eventionnician-type or avilamycin-type orthosomycin biosynthetic gene, gene fragment or gene cluster, especially an exthosomycin biosynthetic gene, gene fragment or gene cluster. The method is useful for detecting the presence of any organism that contains DNA for the production of orthosomycins regardless of the level at which genes for orthosomycin production are expressed by the organism or the amount of orthosomycin production act or organism. This allows for the detection of new orthosomycin natural products, not produced by the organism. (Updated on 27-OCT-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                   Identifying orthosomycin biosynthetic gene, gene fragment or gene cluster, by detecting presence of nucleic acid sequence corresponding to 17 of flambamycins protein families.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        1251 TCAATCCCGCACGTGAACGTGCGGAACGTACAGGATCCAGGCCCCGGCGGGCTGCCGGAA

Nogalamycin is an anthracycline antibiotic, so the nogalamycin biosynthetic pathway is also known as the anthracycline biosynthetic pathway. DNA fragments, plasmids and process from the present invention are useful for obtaining novel hybrid antibiotics, such as anthracyclines (antitumour antibiotics) or

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The sequence encodes 11 proteins comprising enzymes of the everninomicin antibiotic blosynthetic pathway. A vector comprising a M. carbonacea everninomicin blosynthetic pathway resistance gene product is useful for selecting for a transfected or transformed host cell. An integrative version of the vector is useful for introducing a everninomicin pathway agene (a bottleneck gene) into an actinomycete of the genus Micromonospora. The DNA encoding the biosynthetic proteins is useful for synthesising novel everninomicin-related compounds, arising from modifications of the DNA sequence designed to change glycosyl and confidence of the groups contained in everninomicin, for expressing functional or mutant everninomicin biosynthetic enzyme for evaluation, dagnosis and preferably biosynthesis of everninomicins or cher secondary metabolic products, improving the yield of everninomicins and to produce novel everninomicins and also as a hybridisation probe to identify homologous sequences. The encoded polypeptides are useful for combinatorial biosynthesis to generate libraries of orthowycins, e.g. everninomicin analogues/homologues and drug discovery. The DNA encoding the integrase allows for increasing a given gene dosage. The integrate genes of the integrate allows for increasing a given gene dosage. The integrate genes of choice into chromosomes of different hosts and to integrate genes to vector can be used to permanently integrate copies of a heterologous gene of choice into chromosomes of different hosts and to integrate genes in order to carry out bioconversions with compounds to which the strain is order to carry out bioconversions with compounds to which the strain is order to carry out bioconversions with compounds to which the strain is order eds. Streptomyces antibioticus. (Updated on 11-SEP-2003 to standardise OS eds.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New nucleic acid molecules encoding everninomicin pathway gene products, useful for improving yields of everninomicin, to produce new everninomicin and as probes to identify homologous sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                     WPI; 2001-442147/47.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to identifying orthosomycin biosynthetic genes and its fragment/gene cluster (ABZ66670-ABZ666813), comprising detecting the presence of a nucleic acid sequence coding for a polypeptide (ABP99207-ABP99362). The method is useful for identifying an orthosomycin biosynthetic gene, gene fragment or gene cluster, especially an everninomicin-type or avilamycin-type orthosomycin biosynthetic gene, gene fragment or gene cluster. The method is useful for detecting the presence of any organism that contains DNA for the production of orthosomycins help the level at which genes for orthosomycin production are expressed by the organism or the amount of orthosomycin produced by the organism or the amount of orthosomycin orthosomycin natural products, not produced by the organism. This allows for the detection of new orthosomycin natural products, not produced by the organism. (Updated on 27-OCT-2003 to standardise OS field)
                                                                                    Identifying orthosomycin biosynthetic gene, gene fragment or gene cluster, by detecting presence of nucleic acid sequence corresponding to 17 of flambamycins protein families.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      1 GGTACCCGACCGTGTCCCGGAACAACGAGTCGAGATACGGCGAGGAGGAACACCCCCCGGT 60

```

The invention relates to identifying orthosomycin biosynthetic genes and its fragment/gene cluster (ABZ66570-ABZ666813), comprising detecting the presence of a nuclaic acid sequence codding for a polypeptide (ABB99207-ABP99362). The method is useful for identifying an orthosomycin biosynthetic gene, gene fragment or gene cluster, especially an evernionicin-type or avilamycin-type orthosomycin biosynthetic gene, gene fragment or gene cluster. The method is useful for detecting the presence of any organism that contains DNA for the production of prothosomycins (both evernionacin-type orthosomycins and avilamycin-type orthosomycins produced by the organism or the amount of orthosomycin production are expressed by the organism or the amount of orthosomycin production natural products, not produced by the organism. This allows for the detection of new orthosomycin natural products, not produced by the organism. (Updated on 27-OCT-2003 to standardise OS field) Identifying orthosomycin biosynthetic gene, gene fragment or gene cluster, by detecting presence of nucleic acid sequence corresponding to 17 of flambamycins protein families.  everninomicin-type or avilamycin-type orthosomycin biosynthetic gene, gene fragment or gene cluster. The method is useful for detecting the presence of any organism that contains DNA for the production of orthosomycins (both everninomicin-type orthosomycins and avilamycin-type orthosomycins) regardless of the level at which genes for orthosomycin production are expressed by the organism or the amount of orthosomycin produced by the organism. This allows for the detection of new orthosomycin natural products, not produced by the organism. (Updated on 27-OCT-2003 to standardise OS field)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present sequence is the first 42000 bases of the enediyne C-1027 gene cluster from Streptomyces globisporus. Enediyne C-1027 is an antibiotic, consisting of an apoprotein and a non-peptidic chromophore, which acts by damaging DNA. The sequences within the gene cluster, and the proteins they encode, can be used in the treatment of cancer, along with antagonists of the protein. Each of the open reading frames is specifically claimed, excluding ORF 9, which encodes CagA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Novel polypeptide encoded by open reading frame of aminocoumarin biosynthetic gene cluster, useful for synthesizing aminocoumarins useful for treating bacterial infections and malignancies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present sequence is the complete sequence of the Streptomyces spheroides novobiocin biosynthetic gene cluster. The sequences and arrangement of the open reading frames of this gene cluster show similarity to the biosynthetic gene clusters of the aminocounarins coumermycin A1, clorobiocin and simocyclinone (see ACC58250-53). The invention provides aminocounarin biosynthetic nucleic acids and polypeptides, a method for producing hybrid antibiotics using a combination of various regions of biosynthetic gene clusters, and a pharmaceutical compositive hacterial infections and of malignant diseases. (Updated on 27-OCT-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                200 CCTTCGCCATGATCTCGTCGGCGTGGTTCCAGGCGAAGAGCAGCGCGTAGTCCACCGCGT

The present sequence is a partial sequence of the Streptomyces rishiriensis strain DSM 40489 coumermycin Al biosynthetic gene cluster. The sequence was isolated from a cosmid library using probes based on novobiocin-producer Streptomyces spheroides gene sequences. It includes 28 open reading frames (ORFs) that show marked sequence similarity to the corresponding ORFs of the novobiocin cluster, and in identical order. The invention provides aminocoumarin (e.g. coumermycin Al) biosynthetic nucleic acids and polypeptides, a method for producing bybrid antibiotics using a combination of various regions of biosynthetic gene clusters, and a pharmaceutical composition containing an aminocoumarin compound for use in the treatment of Gram-positive bacterial infections and of malignant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       140 TCACGTGTACGCGGGGGACGTACAGGATCCACTGTCCGCCAGCCCGGCGGAACTCCTGCT 199
